

Name : Ms. TAMANNA TANEJA
Lab No. : 507785945
Ref By : DR GANDHI
Collected : 14/4/2026 9:33:00AM
A/c Status : P
Collected at : PUSHPANJALI HOSPITAL

Age : 43 Years
Gender : Female
Reported : 14/4/2026 5:50:48PM
Report Status : Final
Processed at : LPL-PUNJABI BAGH
8, West Avenue Road, Punjabi Bagh,
Delhi - 110026

Test Report

Test Name	Results	Units	Bio. Ref. Interval
LIPID PROFILE, SCREEN, SERUM (CHO-POD)			
Cholesterol, Total	213.30	mg/dL	<200.00
Triglycerides	138.10	mg/dL	<150.00
HDL Cholesterol	55.30	mg/dL	>50.00
LDL Cholesterol, Calculated	130.38	mg/dL	<100.00
VLDL Cholesterol, Calculated	27.62	mg/dL	<30.00
Non-HDL Cholesterol	158	mg/dL	<130

Note

- Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL & LDL Cholesterol.
- Lipid Association of India (LAI) recommends screening of all adults above the age of 20 years for Atherosclerotic Cardiovascular Disease (ASCVD) risk factors especially lipid profile. This should be done earlier if there is family history of premature heart disease, dyslipidemia, obesity or other risk factors
- Triglycerides levels >150 mg/dL in fasting or >175 mg/dL in non-fasting are considered risk modifier for ASCVD risk.
- Test conducted in Serum

Treatment Goals for Lipid lowering therapy (as per Lipid Association of India 2023)

ASCVD RISK CATEGORY	TREATMENT GOAL	
	LDL-C in mg/dL (Primary target)	NON HDL-C in mg/dL (Co-Primary target)
Low	<100	<130
Moderate	<100	<130
High	<70	<100
Very High	<50	<80
Extreme (A)	<50(<30 optional)	<80(<60 optional)
Extreme (B)	<30	<60

ASCVD Risk Stratification & Treatment goals in Indian population

Name	: Ms. TAMANNA TANEJA	Age	: 43 Years
Lab No.	: 507785945	Gender	: Female
Ref By	: DR GANDHI	Reported	: 14/4/2026 5:50:48PM
Collected	: 14/4/2026 9:33:00AM	Report Status	: Final
A/c Status	: P	Processed at	: LPL-PUNJABI BAGH
Collected at	: PUSHPANJALI HOSPITAL		: 8, West Avenue Road, Punjabi Bagh, Delhi - 110026

Test Report

Test Name	Results	Units	Bio. Ref. Interval
-----------	---------	-------	--------------------

Indians are at very high risk of developing ASCVD, they usually get the disease at an early age, have a more severe form of the disease and have poorer outcome as compared to the western populations. Many individuals remain asymptomatic before they get heart attack, ASCVD risk helps to identify high risk individuals even when there is no symptom related to heart disease. Risk stratification is important to guide lipid lowering therapy and to identify treatment goals.

CSI Clinical Practice guidelines (2024) recommends in the absence of formal risk calculator for Indian population, only risk factors can be used for risk assessment. Standard Risk factors are:

- Smoking/tobacco use
- Hypertension
- Diabetes
- Family h/o Premature CAD (Men <55 years and women <60 years)

Risk Assessment*

Low Risk	Moderate Risk	High Risk	Very High Risk	Extremely High Risk
No standard risk factor	Presence of any one standard risk factor	• Presence of 2 or more standard risk factors with no manifest ASCVD • DM with 1 or more risk factor • Heterozygous Familial Hypercholesterolemia (HeFH) with no risk factor • Hypertension with one or more risk factor or with Target organ damage (TOD) • CKD- eGFR 30-59 ml/min	• ASCVD- CAD/PVD/CeVD • Imaging->50% lesion in any two major vessels • DM>20 years or multiple risk factors,TOD • HeFH -with ASCVD or RF • CKD- eGFR <30 ml/min	• ASCVD with recurrent vascular events. • ASCVD with HeFH & High Lp(a)

*** A more formal risk assessment may be used by clinicians according to their personal preferences and familiarity with the risk scores**

Test Report

Test Name	Results	Units	Bio. Ref. Interval
THYROID PROFILE FREE, SERUM (ECLIA)			
Free Triiodothyronine (T3, Free)	3.40	pg/mL	2.00 - 4.40
Free Thyroxine (T4, Free)	1.11	ng/dL	0.93 - 1.70
TSH, Ultrasensitive	4.320	μIU/mL	0.27 - 4.20

Note

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%. hence time of the day has influence on the measured serum TSH concentrations.
2. TSH Values <0.03 μIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals
3. Test conducted on serum

Reference Ranges for pregnancy

PREGNANCY	REFERENCE RANGE for TSH in μIU/mL (As per American Thyroid Association)	REFERENCE RANGE for FT3 in pg/mL	REFERENCE RANGE for FT4 in ng/dL
1st Trimester	0.100 - 2.500	2.11-3.83	0.70 -2.00
2st Trimester	0.200 - 3.000	1.96-3.38	0.50 -1.60
3st Trimester	0.300 - 3.000	1.96-3.38	0.50 -1.60
