Test Report

Test Name	Results	Units	Bio. Ref. Interval
HLA-B27 PCR, QUALITATIVE (Real Time PCR)	Negative		

Note

- Test performed on EDTA / ACD whole blood
- This is an in-house developed assay
- In cases of HLA-B27 negative Spondyloarthritis, further testing recommended is HLA-C*06 (Positive in Psoriatic arthritis) and HLA-B*07 (Positive in Juvenile and Undifferentiated Spondyloarthritis).

Comments

Certain inflammatory and non-inflammatory diseases are associated with the inheritance of HLA alleles. Ankylosing spondylitis and several postinfectious arthropathies are associated with the presence of HLA-B27. Individuals who inherit this class I allele have a 90 fold greater chance of developing the disease as compared to those who do not carry HLA-B27. It is postulated that the mechanism underlying this association most probably influences T cell response.
